# Preparation of Papers in Two-Column Format for Conference Proceedings Sponsored by IEEE

J. Q. Author IEEE Conference Publishing 445 Hoes Lane Piscataway, NJ 08854 USA

Abstract-These instructions give you basic guidelines for preparing papers for conference proceedings.

### I. Introduction

Your goal is to simulate the usual appearance of papers in an *IEEE conference proceedings*. For items not addressed in these instructions, please refer to the last issue of your conference's proceedings or your Publications chair.

### Preparing your Electronic Paper

Prepare your paper in full-size format, on US letter paper (8 ½ by 11 inches). For A4 paper, use the A4 settings.

*Type Sizes and Typefaces*: Follow the type sizes specified in Table I. As an aid in gauging type size, 1 point is about 0.35

Table I. As an aid in gauging type size, 1 point is about 0.35 mm. The size of the lowercase letter "j" will give the point size. Times New Roman is the preferred font.

- 1) US Letter Margins: top = 0.75 inches, bottom = 1 inch, side = 0.625 inches. Each column measures 3.5 inches wide, with a 0.25-inch measurement between columns
- with a 0.25-inch measurement between columns.

  2) A4 Margins: top = 19mm, bottom = 43mm, side = 13 mm. The A4 column width is 88mm (3.45 in). The space

between the two columns is 4mm (0.17 in). Paragraph indentation is 3.5 mm (0.14 in).

Left- and right-justify your columns. Use tables and figures

to adjust column length. On the last page of your paper, adjust the lengths of the columns so that they are equal. Use automatic hyphenation and check spelling. Digitize or paste down figures.

TABLE I

Type Sizes for Papers

Type Appearance

Type	Appearance		
size (pts.)	Regular	Bold	Italic
6	Table captions, <sup>a</sup> table superscripts		
8	Section titles, a references, tables, table names, first letters in table captions, a figure captions, footnotes, text subscripts, and superscripts		
9		Abstract	
10	Authors' affiliations, main text, equations, first letters in section titles <sup>a</sup>		Subheading
11	Authors' names		
24	Paper title		

<sup>a</sup>Uppercase

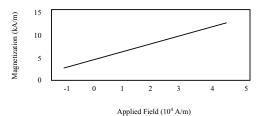

Fig. 1. Magnetization as a function of applied field. Note how the caption is centered in the column.

### II. HELPFUL HINTS

Position figures and tables at the tops and bottoms of

### A. Figures and Tables

columns. Avoid placing them in the middle of columns. Large figures and tables may span across both columns. Figure captions should be centered below the figures; table captions should be centered above. Avoid placing figures and tables before their first mention in the text. Use the abbreviation "Fig. 1," even at the beginning of a sentence.

words rather than symbols. For example, write "Magnetization," or "Magnetization (M)" not just "M." Put units in parentheses. Do not label axes only with units. In the example, write "Magnetization (A/m)" or "Magnetization (A  $\cdot$ 

Figure axis labels are often a source of confusion. Use

Multipliers can be especially confusing. Write "Magnetization (kA/m)" or "Magnetization (10<sup>3</sup> A/m)." Figure labels should be legible, about 10-point type. B. References Number citations consecutively in square brackets [1].

m<sup>1</sup>)." Do not label axes with a ratio of quantities and units. For example, write "Temperature(K)," not "Temperature/K."

Punctuation follows the bracket [2]. Refer simply to the referencenumber, as in[3]. Use "Ref. [3]" or Reference [3]" at

the beginning of a sentence: "Reference [3] was the first ..." Number footnotes sepately in superstipts. Place Ite actual footnote at the bottom of the column in which it was

cited. Do not put footnotes in the reference list. Use letters for table botnotes (see Tlale I). IEEE Transactions olonger use ajournal prefix before the volume number. For example, use 'IEEE Trans. Magn, vol. 25," not "vol. MAG-25.

Give all authors' names; use "et al." if there are six authors or more. Papers that have not been published, even if they have been submitted for publication, should be cited as "unpublished" [4]. Papers that have been accepted for

publication should be cited as "in press" [5]. In a paper title, capitalize the first word and all other words except for

conjunctions, prepositions less than seven letters, and prepositional phrases. For papers published in translated journals, first give the English citation, then the original foreign-language citation [6].

C. Abbreviations and Acronyms

## Define abbreviations and acronyms the first time they are

used in the text, even if they have been defined in the abstract. Abbreviations such as IEEE, SI, MKS, CGS, ac, dc, and rms do not have to be defined. Do not use abbreviations in the title unless they are unavoidable.

## D. Equations Number equations consecutively with equation numbers in

your equations more compact, you may use the solidus ( / ), the exp function, or appropriate exponents. Italicize Roman symbols for quantities and variables, but not Greek symbols. Use an en dash (–) rather than a hyphen for a minus sign. Use parentheses to avoid ambiguities in denominators. Punctuate equations with commas or periods when they are part of a sentence, as in

parentheses flush with the right margin, as in (1). To make

$$a+b=c. (1)$$

Symbols in your equation should be defined before the equation appears or immediately following. Use "(1)," not "Eq. (1)" or "equation (1)," except at the beginning of a sentence: "Equation (1) is ..."

# E. Other Recommendations The Roman numerals used to number the section headings are optional. If you do use them, do not number

calculated the potential."

Use a zero before decimal points: "0.25," not ".25." Use "cm³," not "cc."

Do not mix complete spellings and abbraviotions of units: "W/b/m²" or "webers per square

ACKNOWLEDGMENT and REFERENCES, and begin Subheadings with letters. Use two spaces after periods (full stops). Hyphenate complex modifiers: "zero-field-cooled magnetization." Avoid dangling participles, such as, "Using (1), the potential was calculated." Write instead, "The potential was calculated using (1)," or "Using (1), we

abbreviations of units: "Wb/m²" or "webers per square meter," not "webers/m²." Spell units when they appear in text: "...a few henries," not "...a few H." If your native language is

"...a few henries," not "...a few H." If your native language is not English, try to get a native English-speaking colleague to proofread your paper. Do not add page numbers.

#### III. UNITS

Use either SI (MKS) or CGS as primary units. (SI units are encouraged.) English units may be used as secondary units (in parentheses). An exception would be the use of English units as identifiers in trade, such as "3.5-inch disk drive."

Avoid combining SI and CGS units, such as current in amperes and magnetic field in oersteds. This often leads to

amperes and magnetic field in oersteds. This often leads to confusion because equations do not balance dimensionally. If

you must use mixed units, clearly state the units for each quantity that you use in an equation.

# IV. SOME COMMON MISTAKES The word "data" is plural, not singular. The subscript for

the permeability of vacuum<sub>0</sub> is zero, not a lowercase letter "o."

In American English, periods and commas are within quotation marks, like "this period." A parenthetical statement at the end of a sentence is punctuated outside of the closing parenthesis (like this). (A parenthetical sentence is punctuated within the parentheses.) A graph within a graph is an "inset," not an "insert." The word alternatively is preferred to the word "alternately" (unless you mean something that alternates). Do not use the word "essentially" to mean "approximately" or "effectively." Be aware of the different meanings of the homophones "affect" and "effect," "complement" and "compliment," "discreet" and "discrete," "principal" and "principle." Do not confuse "imply" and "infer." The prefix "non" is not a word; it should be joined to the word it modifies, usually without a hyphen. There is no period after the "et" in the Latin abbreviation "et al." The abbreviation "i.e." means "that is," and the abbreviation "e.g." means "for example." An excellent style manual for science

#### ACKNOWLEDGMENT

writers is [7].

The preferred spelling of the word "acknowledgment" in

stilted expression, "One of us (R. B. G.) thanks ..." Instead, try "R.B.G. thanks ..." Put sponsor acknowledgments in the unnumbered footnote on the first page. REFERENCES

America is without an "e" after the "g." Try to avoid the
